

Professional Summary

Senior Backend Engineer with 7 years of experience designing and scaling distributed systems for high-traffic SaaS products. Deep expertise in Python, Django, and PostgreSQL, with a strong record of improving system reliability and reducing infrastructure costs. Experienced leading small engineering teams and mentoring junior developers. Comfortable operating across the full backend stack from API design to database optimization to cloud infrastructure.

Professional Experience

Senior Backend Engineer

DataStream Inc. — Boston, MA | March 2020 – Present

- Led the re-architecture of the core data ingestion pipeline from a monolith to microservices, reducing average API response time by 43% and supporting 3x traffic growth.
- Designed and implemented a PostgreSQL query optimization initiative that reduced database load by 38% and saved \$120K annually in cloud infrastructure costs.
- Built and maintained 12 RESTful APIs consumed by web and mobile clients, handling 15M+ requests per day at 99.98% uptime.
- Mentored a team of 4 junior and mid-level engineers through weekly code reviews, pair programming sessions, and technical design discussions.
- Introduced automated integration testing (pytest) that increased code coverage from 41% to 87% across the backend codebase.

Backend Engineer

Nexus Platform — Cambridge, MA | June 2017 – February 2020

- Developed core features for a B2B SaaS analytics platform serving 500+ enterprise clients using Python, Django REST Framework, and Celery.
- Migrated legacy MySQL database to PostgreSQL and introduced indexing strategy that reduced query time by 60% on the five most frequently called endpoints.
- Built asynchronous task queues using Celery and Redis to handle report generation jobs, eliminating request timeouts for 100% of large-report requests.
- Collaborated with frontend team and product managers to design and document REST APIs using OpenAPI/Swagger.

Junior Software Engineer

Brightline Software — Providence, RI | August 2015 – May 2017

- Built and maintained Python scripts for data processing pipelines handling structured and semi-structured input from third-party vendors.
- Contributed to an internal Django web application for project tracking used by 80+ employees.

Technical Skills

Languages: Python (7 years), SQL, Bash, JavaScript (working knowledge)

Frameworks: Django, Django REST Framework, FastAPI, Celery

Databases: PostgreSQL, Redis, MySQL, basic MongoDB experience

Cloud & Infrastructure: AWS (EC2, RDS, S3, Lambda), Docker, basic Kubernetes

Testing & CI/CD: pytest, GitHub Actions, Jenkins

Other: REST API design, OpenAPI/Swagger, Git, Agile/Scrum

Education

B.S. Computer Science — University of Rhode Island | 2015

Certifications

AWS Certified Developer – Associate | 2022
